## Outline

Chris Godsil and Aidan Roy

Bases

## Outline

Chris Godsil and Aidan Roy

## Flat Matrices

#### Definition

A complex matrix *M* is flat if all its entries have the same absolute value.

◆□ > ◆□ > ◆ 臣 > ◆ 臣 > ● ○ ● ● ● ●

Chris Godsil and Aidan Roy

## **Unbiased Bases**

#### Definition

Two orthogonal bases in  $\mathbb{C}^d$  are unbiased if the corresponding change of basis matrix is flat.

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ▶

Chris Godsil and Aidan Roy

Bases

## Unbiasedness is a Symmetric Relation

If *M* is flat, so are  $\overline{M}$ ,  $M^T$  and  $M^*$ .

◆□ > ◆□ > ◆三 > ◆三 > ◆□ > ◆○ >

Chris Godsil and Aidan Roy

## Unbiasedness is a Symmetric Relation

- If *M* is flat, so are  $\overline{M}$ ,  $M^T$  and  $M^*$ .
- The change of basis matrix between orthogonal bases is unitary.

Chris Godsil and Aidan Roy

**Unbiased Unitary Matrices** 

An ordered orthogonal basis in  $\mathbb{C}^d$  corresponds to a  $d \times d$ unitary matrix. If U and V are unitary  $d \times d$  matrices, the corresponding orthogonal bases are unbiased if and only if  $U^*V$ is flat (and unitary).

Chris Godsil and Aidan Roy

## **Unbiased Unitary Matrices**

An ordered orthogonal basis in  $\mathbb{C}^d$  corresponds to a  $d \times d$ unitary matrix. If U and V are unitary  $d \times d$  matrices, the corresponding orthogonal bases are unbiased if and only if  $U^*V$ is flat (and unitary).

In which case, the columns of I and  $U^*V$  form an unbiased pair of bases.

## Entries of Flat Unitary Matrices

If *M* is flat and  $d \times d$  and  $|M_{i,j}| = \alpha$  for all *i* and *j*, then  $(MM^*)_{i,i} = d\alpha^2$  for all *i*.

◆□ > ◆□ > ◆臣 > ◆臣 > 善臣 - のへぐ

## Entries of Flat Unitary Matrices

- If *M* is flat and  $d \times d$  and  $|M_{i,j}| = \alpha$  for all *i* and *j*, then  $(MM^*)_{i,i} = d\alpha^2$  for all *i*.
- If *M* is unitary,  $MM^* = I$ , and therefore

Chris Godsil and Aidan Roy

## Entries of Flat Unitary Matrices

- If *M* is flat and  $d \times d$  and  $|M_{i,j}| = \alpha$  for all *i* and *j*, then  $(MM^*)_{i,i} = d\alpha^2$  for all *i*.
- If *M* is unitary,  $MM^* = I$ , and therefore
- If *M* is flat and unitary,  $|M_{i,j}| = d^{-1/2}$ .

Chris Godsil and Aidan Roy

## Hadamard Matrices

#### Definition

## A Hadamard matrix *H* is a $d \times d$ matrix with entries $\pm 1$ such that $H^T H = dI$ .

Chris Godsil and Aidan Roy

## Hadamard Matrices

#### Definition

A Hadamard matrix *H* is a  $d \times d$  matrix with entries  $\pm 1$  such that  $H^T H = dI$ .

#### Example

$$H = \begin{pmatrix} 1 & 1 \\ 1 & -1 \end{pmatrix}$$

▲□▶▲圖▶▲圖▶▲圖▶ 圖 のへの

Chris Godsil and Aidan Roy

## Hadamard Bases

#### Example

If *H* is Hadamard with order  $d \times d$ , then

 $d^{-1/2}H$ 

is flat and unitary and the orthogonal bases given by  $I_d$  and  $d^{-1/2}H$  are unbiased.

▲□▶▲圖▶▲圖▶▲圖▶ 圖 のへの

Chris Godsil and Aidan Roy

## Example: Vandermonde

#### Example

Let  $\theta$  be a primitive *d*-th root of unity, and let *V* be the  $d \times d$  matrix given by

$$V_{i,j} := \theta^{(i-1)(j-1)}$$

Then  $d^{-1/2}V$  is flat and unitary.

Chris Godsil and Aidan Roy

## Outline

Chris Godsil and Aidan Roy

## A Definition

#### Definition

A set of orthogonal bases of  $\mathbb{C}^d$  is mutually unbiased if each pair of bases in it is unbiased.

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ▶

Chris Godsil and Aidan Roy

Why?

#### Why do we want mutually unbiased sets of bases?

Chris Godsil and Aidan Roy

## Applications

- Quantum key exchange.
- Determining the state of a quantum system.
- Constructing discrete Wigner functions.

## **Upper Bounds**

The maximum size of a set of mutually unbiased bases is at most:

$$d + 1 \text{ in } \mathbb{C}^d,$$
  
and  
$$\frac{1}{2}d + 1 \text{ in } \mathbb{R}^d$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ ▲目 ● ●

Chris Godsil and Aidan Roy

Unbiased Sets of Bases

## The Main Problem

## For which integers *d* is it possible to construct a set of d + 1 mutually unbiased bases in $\mathbb{C}^d$ ?

Chris Godsil and Aidan Roy

## Example

# $\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}, \quad \frac{1}{\sqrt{2}} \begin{pmatrix} 1 & 1 \\ 1 & -1 \end{pmatrix}, \quad \frac{1}{\sqrt{2}} \begin{pmatrix} 1 & 1 \\ i & -i \end{pmatrix}$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 目 のへぐ

Chris Godsil and Aidan Roy

## Outline

Chris Godsil and Aidan Roy

## Hermitian Matrices

A set of *m* mutually unbiased bases in  $\mathbb{C}^d$  gives a set of *md* unit vectors

 $x_1, \ldots, x_{md}$ .

If  $X_i := x_i x_i^*$ , we then have *md* matrices

 $X_1,\ldots,X_{md}$ 

each lying in  $\mathcal{H}(d)$ , the real vector space of Hermitian  $d \times d$  matrices.

Chris Godsil and Aidan Roy

## A Gram Matrix

Define an inner product on the space of Hermitian matrices by

 $\langle H|K\rangle := \operatorname{tr}(HK).$ 

Let G be the  $md \times md$  matrix with

 $G_{i,j} = \langle X_i | X_j \rangle.$ 

▲□▶▲圖▶▲圖▶▲圖▶ ▲圖 今へ?

Chris Godsil and Aidan Roy

## The Complete Multipartite Graph

Then

$$G = I + d^{-1}A,$$

where A is the adjacency matrix of the complete multipartite graph, with m parts of size d. We know that

$$\operatorname{rk}(G) = md - m + 1$$

and therefore-

・ロト・日本・日本・日本・日本・日本

Chris Godsil and Aidan Roy

## The Complete Multipartite Graph, ctd.

$$md - m + 1 = \operatorname{rk}(G)$$
  
= dim(span({X<sub>i</sub>}<sub>i=1</sub>))  
 $\leq$  dim( $\mathcal{H}(d)$ )  
=  $d^2$ .

▲□▶▲@▶▲≣▶▲≣▶ ≣ のQで

Chris Godsil and Aidan Roy

## The Bound

#### Theorem

The maximum size of a set of mutually unbiased bases in  $\mathbb{C}^d$  is d + 1.

◆□ > ◆□ > ◆目 > ◆目 > ◆□ > ◆□ >

Chris Godsil and Aidan Roy

## Is the Bound Good?

Sets of d + 1 mutually unbiased bases in  $\mathbb{C}^d$  are known to exist if *d* is a prime power :-)

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ▶ ◆ ○ ●

Chris Godsil and Aidan Roy

## Is the Bound Good?

Sets of d + 1 mutually unbiased bases in  $\mathbb{C}^d$  are known to exist if *d* is a prime power :-)

If d = 2e, where *e* is odd, a product-type construction due to Klappenecker and Rötteler yields triples, but no larger sets are known :-(

## Links

#### Or we can construct triples from spin models.

▲□▶ ▲□▶ ▲目▶ ▲目▶ 目 のへぐ

Chris Godsil and Aidan Roy

## Links

#### Or we can construct triples from spin models. But that is....

◆□ > ◆□ > ◆ □ >

Chris Godsil and Aidan Roy

## circus?

... another kettle of fish:

#### 

Chris Godsil and Aidan Roy

### **Real Pairs**

### If a pair of mutually unbiased bases exists in ℝ<sup>d</sup>, then d = 2 or 4 | d and a Hadamard matrix of order d × d exists.

Chris Godsil and Aidan Roy

## Real Mutually Unbiased Triples

Suppose we have a triple of mutually unbiased bases in  $\mathbb{R}^d$ . Then there must be Hadamard matrices *H* and *K* of order  $d \times d$ , so that our mutually unbiased bases are the columns of

$$\overline{H}, \quad \frac{1}{\sqrt{d}}H, \quad \frac{1}{\sqrt{d}}K,$$

1

and the product

$$\frac{1}{d}H^T K$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ ◆□ ◆ ○ ◆

must be flat and unitary.

Chris Godsil and Aidan Roy

How Many?

Real Triples are Scarce...

Consequently

- each entry of  $H^T K$  must be equal to  $\pm \sqrt{d}$ , and
- since *H* and *K* are integer matrices, *d* is the square of an integer.

How Many?

#### ...But Do Exist

Chris Godsil and Aidan Roy

Covers

### Outline

Chris Godsil and Aidan Roy

#### Covers of Complete Bipartite Graphs

Let *X* be a graph with *d* vertices. We construct a cover of *X* with *index* r as follows.

The vertex set of the cover is

 $V(X) \times \{1,\ldots,d\}.$ 

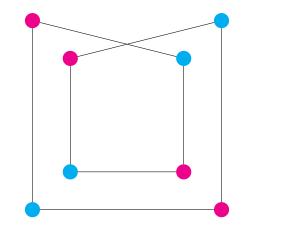

So we have *d* fibres of size, each fibre corresponds to a vertex of *X*.

If two fibres of the correspond to adjacent vertices in G we join the vertices in the first fibre to the vertices in the second by a matching with size r.

Chris Godsil and Aidan Roy

Covers

#### An Example

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Chris Godsil and Aidan Roy

Covers

# If $X = K_{d,d}$ , then a cover of X with index r is a bipartite graph on rd + rd vertices, regular of degree d.

Chris Godsil and Aidan Roy

# Outline

Chris Godsil and Aidan Roy

## **Distance-Regular Covers**

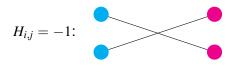

We want more! We want covers *Y* of  $K_{d,d}$  such that

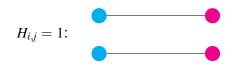

- Y has diameter four.
- Two distinct vertices in the same fibre are at distance four, and two vertices in different fibres are at distance less than four.
- There is a constant, traditionally c<sub>2</sub>, such that if u and v are at distance two in Y, then they have exactly c<sub>2</sub> common neighbours.
- If the above conditions hold, then  $rc_2 = d$ .

#### Hadamard

# 2-fold antipodal distance-regular covers of $K_{d,d}$ correspond to Hadamard matrices.

Chris Godsil and Aidan Roy

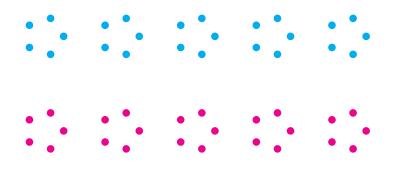

Chris Godsil and Aidan Roy

#### Affine Planes

*d*-fold covers of  $K_{d,d}$  correspond to affine planes with one parallel class of lines deleted.

Chris Godsil and Aidan Roy

AG(2,5)

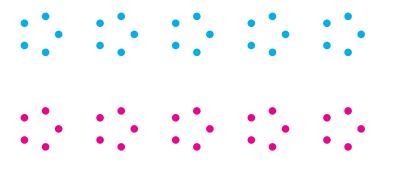

Adjacency:  $(x, y) \sim [a, y - ax]$ .

## Hoffman-Singleton, Robertson

Adjacency:  $(x, y) \sim [a, y - ax]$ .

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Chris Godsil and Aidan Roy

## Abelian Groups

If we have an *r*-fold cover of  $K_{d,d}$  and an abelian group of automorphisms acting transitively on each colour class, the eigenvectors of the cover give rise to a set of *r* mutually unbiased bases in  $\mathbb{C}^d$ .

Chris Godsil and Aidan Roy

## Semifields

Each commutative semifield of order q gives a q-fold cover of  $K_{q,q}$  with an abelian group acting as required.

Chris Godsil and Aidan Roy

# Semifields

Each commutative semifield of order q gives a q-fold cover of  $K_{q,q}$  with an abelian group acting as required.

Q: wth is a semifield?

# Semifields

Each commutative semifield of order q gives a q-fold cover of  $K_{q,q}$  with an abelian group acting as required.

Q: wth is a semifield? A: drop associativity

# History

The first examples of maximal sets of mutually unbiased bases were found by Ivanovic (1981), in the case where d is prime.

◆□▶ ◆□▶ ◆三▶ ◆三▶ ◆□ ◆ ○ ◆

# History

- The first examples of maximal sets of mutually unbiased bases were found by Ivanovic (1981), in the case where d is prime.
- Wootters and Fields (1989) found constructions for all prime-power values of d.

# History

- The first examples of maximal sets of mutually unbiased bases were found by Ivanovic (1981), in the case where d is prime.
- Wootters and Fields (1989) found constructions for all prime-power values of d.
- Calderbank, Cameron, Kantor and Seidel (1997) show how to construct maximal sets in prime-power dimensions, using symplectic spreads. This construction yields the same examples as our semifield construction. :-(

#### Future

Can we use covers to find sets of four mutually unbiased bases in dimension 2e, where e is odd?

Chris Godsil and Aidan Roy

# Future

- Can we use covers to find sets of four mutually unbiased bases in dimension 2e, where e is odd?
- We have observed connections with the theory of spin models, introduced by Vaughan Jones in his work on link invariants. These provide a generalization of our construction, which we have not yet investigated in any depth.

## Future

- Can we use covers to find sets of four mutually unbiased bases in dimension 2e, where e is odd?
- We have observed connections with the theory of spin models, introduced by Vaughan Jones in his work on link invariants. These provide a generalization of our construction, which we have not yet investigated in any depth.
- A mutually unbiased set of bases determines a set of lines in C<sup>d</sup>. If we replace the distance-regular covers of complete graphs by other classes of distance-regular graphs, we can use our technology to construct other interesting sets of complex lines. This needs further investigation.
