

CO 330 LECTURE 1 SUMMARY PART 1

FALL 2026

SUMMARY

The previous day had been an optional review session reviewing things from math 239 that will help you thrive in this course.

The first part of this lecture was the introduction. The key facts are I'm Ren Yeats (he/they) and you should look at the syllabus for more detail and keep an eye on the website of the course. The midterms are Wednesday Oct 7 and Wednesday October 18 in class. Don't use AI to solve your homework problems; that's like going to the gym and having a robot lift the weights for you.

One thing I meant to do but forgot was to ask you if you wanted a discussion forum of some sort (piazza, discord, ?) for this course. So think about that and we'll talk about it at the start of Monday's class.

The lecture continued with the start of the content, which is in a separate summary file.
